

## **RenalTrac: ESRD Billing for Windows**

Even the most skilled personnel are often frustrated, and sometimes ineffective, due to outdated or limited systems. The RenalTrac for Windows' capability for comprehensive billing captures all services, organizes the data and produces accurate and timely claims.

As each service is posted, either through a clinical interface or inputted directly, every charge-routine and nonroutine-enters the system to be tracked, categorized, reported and billed monthly, assuring prompt reimbursement.

### Timely Month-End Processing

With RenalTrac for Windows, Medicare, Medicaid, commercial insurance and secondary insurance forms and patient statements are produced rapidly at month's end. Electronic claims processing is available for further speeding your reimbursement. And a full range of A/R, revenue, financial and statistical reports are prepared and generated on demand.

### Database Support

RenalTrac successfully interfaces with clinical management systems reducing the potential for data entry error. It is capable of supporting extensive databases, including patient, service and revenue codes, financial classes, treatment modes and ICD-9-CMs. And with the added interactivity of a Windows platform, accessing data is easy. There's no learning curve lag time. Built on MicroSoft Visual Basic and the Oracle database, the RenalTrac systems have the power, speed and capacity to fully handle an ESRD facility of virtually any size and any configuration. Further, the flexibility of the RenalTrac database permits easy exporting to programs such as MicroSoft Excel and MicroSoft Access.

Automatic and customized financial reporting  
(individual facility or organizational structure)

Integrated electronic claims processing

User-defined system security

On-line help screens

Clinical information systems interface

### **RenalTrac:ESRD Clinical for Windows**

Your clinical management depends on fast, accurate and accessible patient data, data that covers every aspect of patient care from initial intake through medical treatment, dialysis and aftercare.

CAPCOM RenalTrac:Clinical offers multiple modules that record, track and report specific dialysis unit services. Medical, nursing and technical staff are able to access up-to-the minute patient information- remotely- without duplicating effort or overlapping services. Most importantly, the comprehensiveness with which each patient is tracked reduces the potential for medical error. Built on MicroSoft Visual Basic and the Oracle database, the RenalTrac systems have the power, speed and capacity to fully handle an ESRD facility of virtually any size and any configuration. Further, the flexibility of the RenalTrac database permits easy exporting to programs such as MicroSoft Excel and MicroSoft Access.\*

CAPCOM software interfaces with multi-station dialysis monitoring systems, producing hardcopy information to conduct and monitor treatment. And The CAPCOM RenalTrac:Clinical outputs various statistical and analysis reports in trend form to meet your facility's needs as well as those of government and QA programs.
