

The CAPCOM MSO System

In an effort to meet the complex needs of the emerging healthcare arena, CAPCOM has developed the CAPCOM system to fully address the demanding needs of the MSO/PPO environments.

As most MSOs/PPOs are structured, an administrative office handles the daily functions involved in managing multiple practices of various specialties. The complex nature of such an operation requires the site computer system to handle various tasks as well as remote operation from all the individual practices into the central administration office. The CAPCOM MSO/PPO system was designed for just this environment. The CAPCOM system enables the administration office to have complete financial and system control over all of the individual sites by enabling such tasks as patient billing, payment posting, claim follow-up and financial reporting done at a central location. With each remote site capable of updating schedules, demographics and posting charges for their individual site. CAPCOM can even customize your system to meet the specific tasks of your central office and your remote practices.

Additionally, the CAPCOM MSO/PPO system offers the additional advanced features such as lab interface, ad-hoc reporting, managed cost reporting, patient recall and electronic EOB posting. Further, the structure of the CAPCOM system can accommodate your MSO/PPO environment as you continue to grow and add additional practices.

If you are in need of an MSO/PPO system or, due to limited capacity of your existing system, desire to replace your existing MSO/PPO system, contact CAPCOM and learn about our advanced system for your advanced MSO/PPO environment.
